

# Plex On Fire

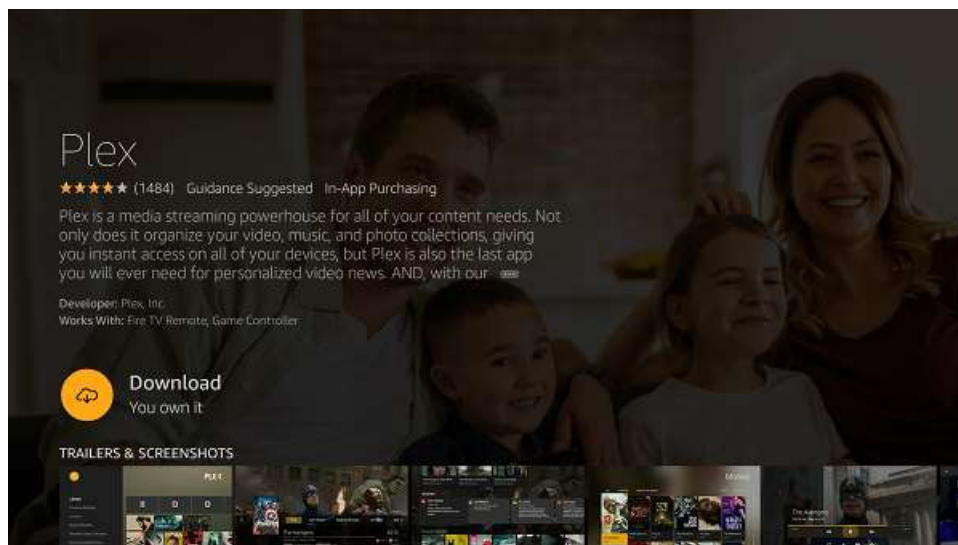

Turn off Auto Updates

Applications > Appstore > Auto Updates OFF

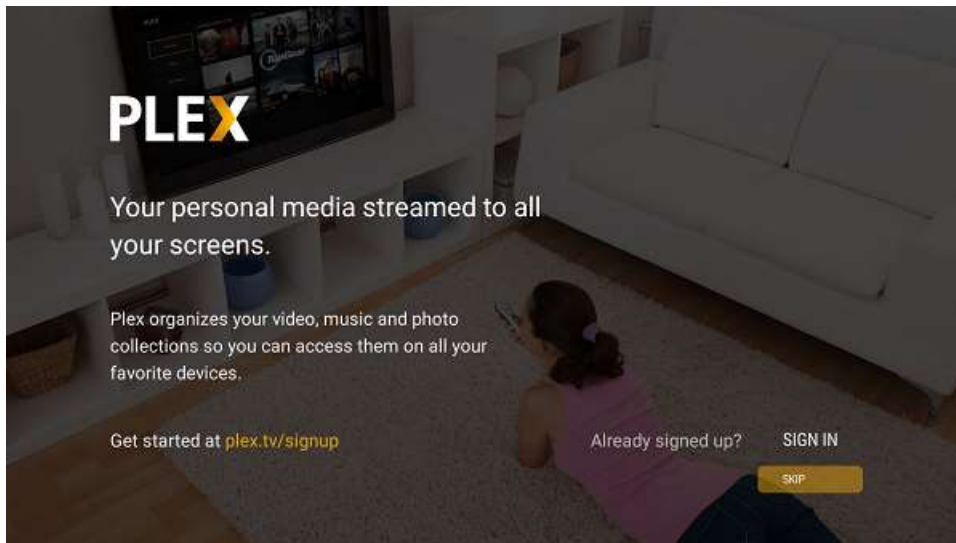

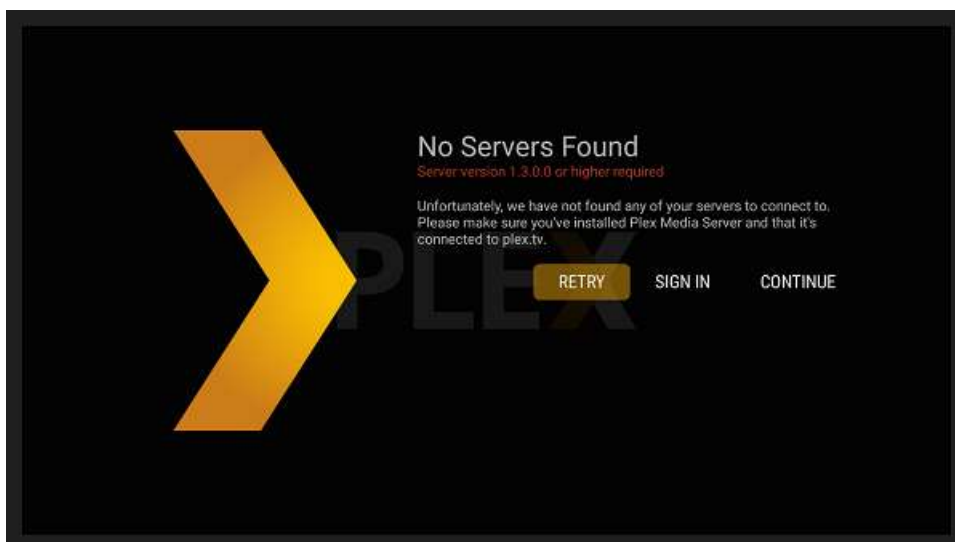

Along the top left look for the search icon and search Plex & Download

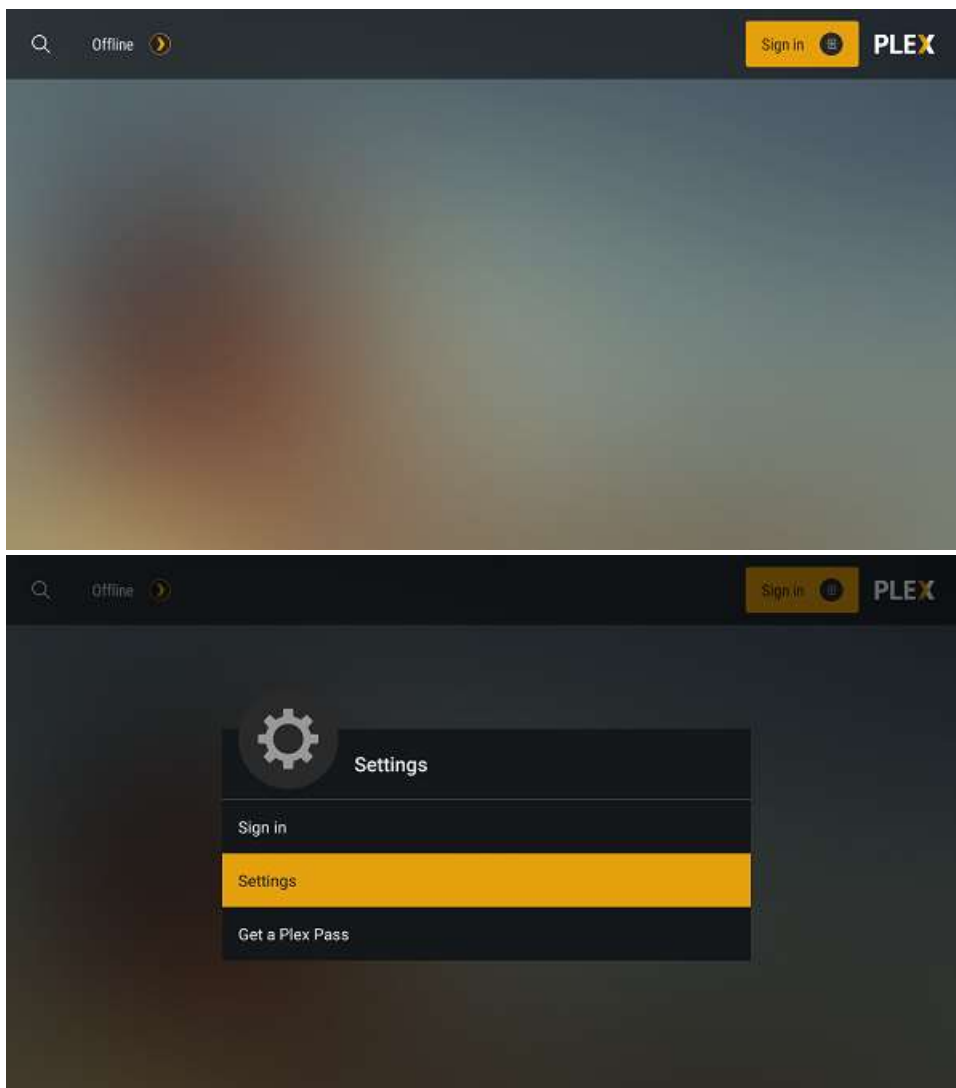

Once downloaded open it up and click skip (under sign in TWICE)

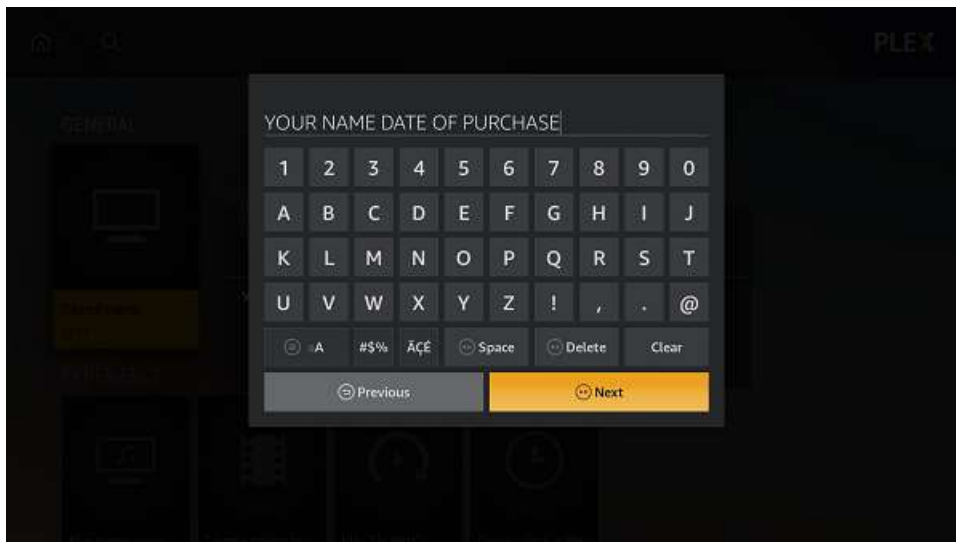

If you are faced with this error please press Continue

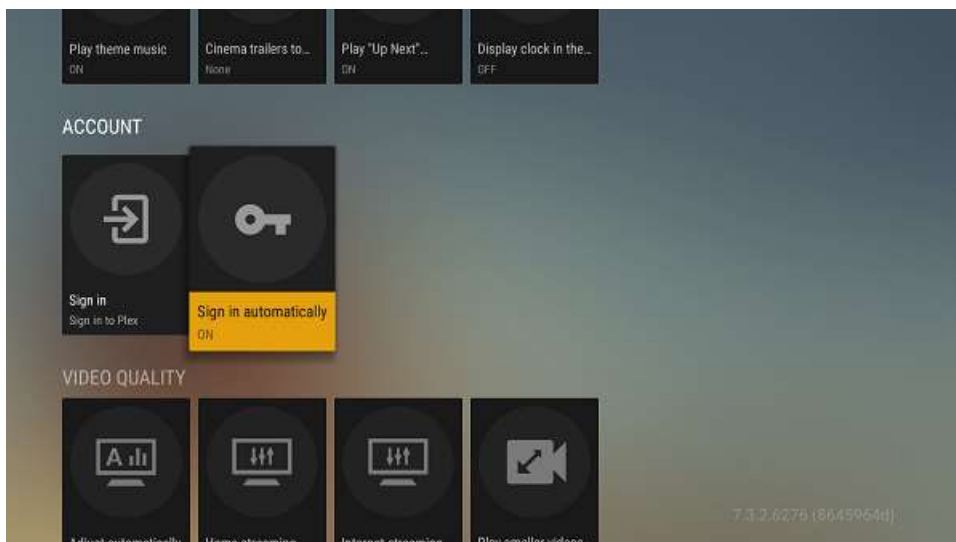

Top right Click where it says Sign In then Settings

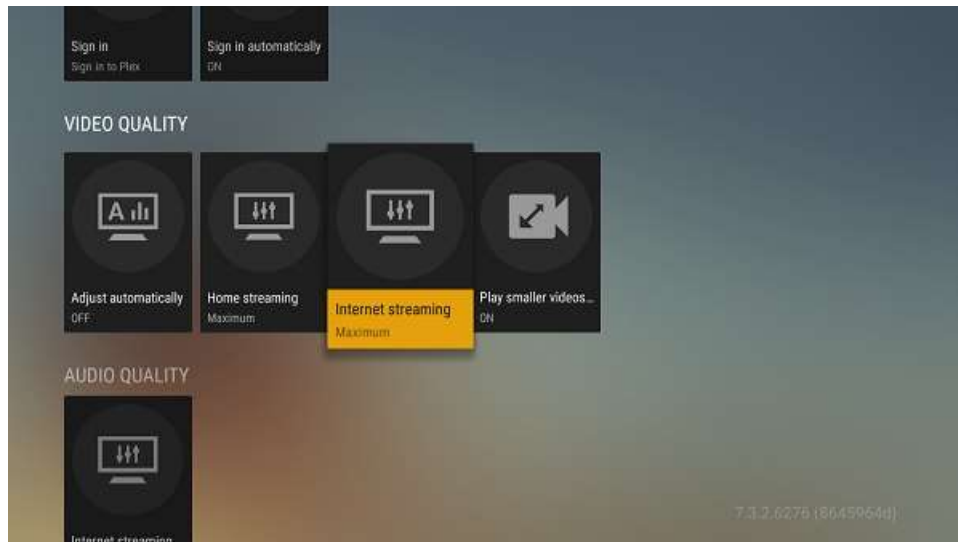

Under General > Name enter your name /  
purchase date in this exact format eg  
Joe Bloggs 13/08/18

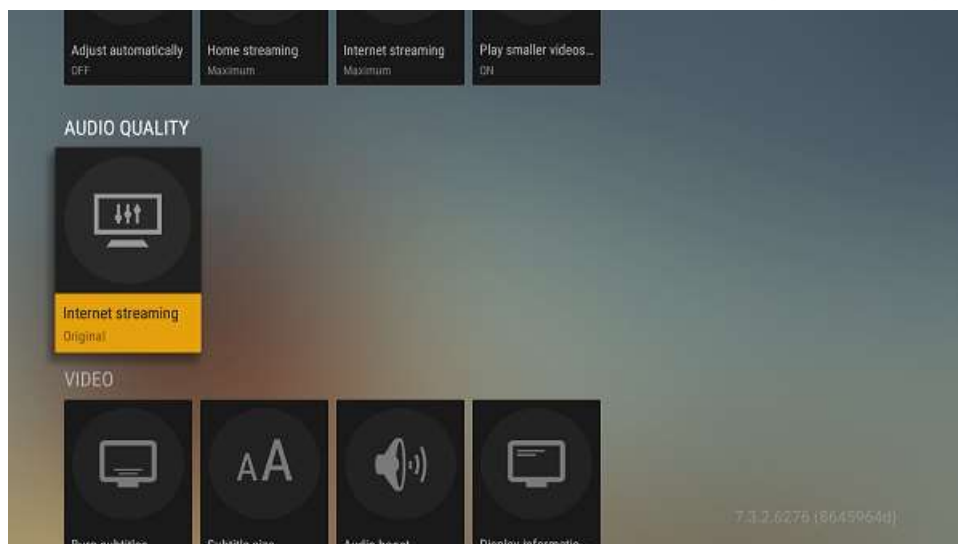

Under account put Sign In Auto to ON

Under Video set to as in photo – Maximum and Smaller Videos to ON

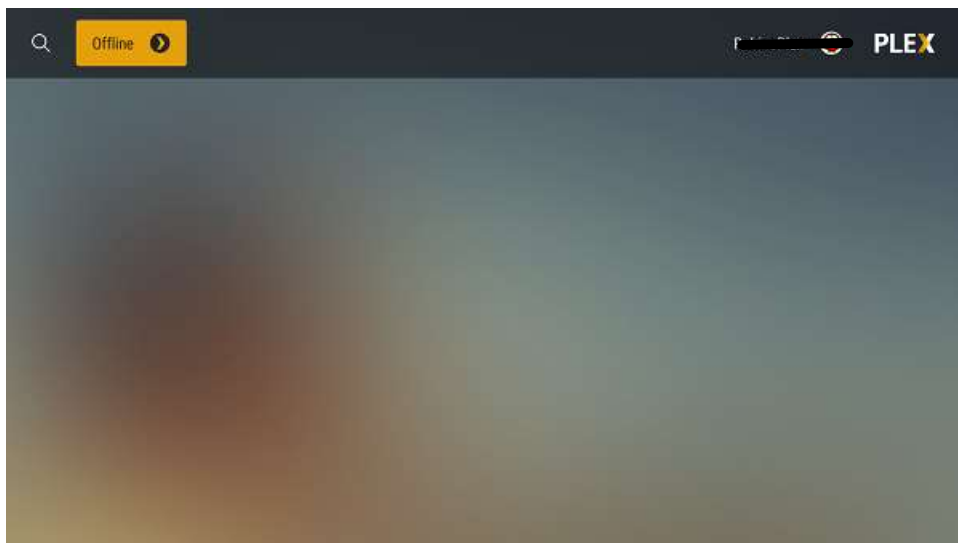

Under Audio Set Internet Streaming to Original

Once you get to this point message the admin that you are setting up with. They'll need a photo of the name you just set under General > Name

If after you are connected you face this Offline screen, simply just click where it says Offline and it'll bring up all servers. This is also how you will change servers for different content.

Now sit back and enjoy :D
